

AN19 | Average across all available segment types

HuBERT Tr-24, 3-D t-SNE | Six English reference talkers

AUTOMATIC TARGET-PHONE ALIGNMENT - NOT MANUALLY VERIFIED

36 L2 talkers | 35 segment types overall; 32-35 per talker | 5,114 eligible L2 intervals

Equal weight per available segment type, after equal-word averaging within each type.

CI: 1,000 talker-bootstrap samples within each L1; segment and word coverage vary.

Descriptive estimates; the stricter duration/posterior filter retains only 197 intervals across all types. That stricter subset is not used in this plot; automatic-boundary uncertainty is not included in the CI.
